How do I get urgent or after-hours care?

1. Call your doctor’s office. You can call your doctor at any time of the day, including evenings and weekends. Your doctor — or the doctor on-call — may provide you with home care remedies or find it necessary for you to seek care at the emergency room or your medical group’s contracted urgent care center.

2. Call Nurse24. If you have a medical concern and are not sure what to do, you can call our nurse advice line at 877.793.3655. Nurse24SM is available 24/7 so you can call any time of the day or night.

3. Be prepared. Know the contact information and location of the closest emergency room, your medical group’s contracted urgent care center(s), poison control and closest friend/relative.
